

Westlake weekly air monitoring update (Friday, August 22, 2014).

Goal: Develop an air monitoring plan to sample for landfill constituents (COC's, RIM), in conjunction with the PRP, prior to and during the construction of the isolation barrier (IB) being built to contain the RIM in OU-1, that could be impacted by the SSE. Continued air monitoring activities on site (M. Schmaedick).

Admin: No issues of concern noted this week.

Data: AreaRaes filters to be changed bi-monthly.

QAPP: No issues of concern noted this week.

Equipment: No issues of concern noted this week.

ECAM: Still waiting on NRC license to possess/use radioactive materials.

Site File: The OSC.gov website was updated this week.

Issues: Further construction work was performed at the fire station training center located next to the EPA trailer. OSC Johnson coordinating with team to determine location to relocate trailer and air monitoring unit. Construction activities may have impacted monitoring units at Station 1 resulting in elevated levels of VOCs and CO. Monitoring and sampling activities continued throughout the week without any major issues or problems.

Media: No media interest generated at the air monitoring site this week.
